

## LAB 5

1. Write a program to show different popup boxes.
  - a. **alert** (display your name inside box when user execute the page)
  - b. **prompt** (input your name in input box and If the user clicks "OK" the box returns the input value. If the user clicks "Cancel" the box returns null.)
  - c. **confirm** (display message "you want to continue" message when ok button is clicked and "you don't want to continue" message when cancel button is clicked")
2. Write a program to add two numbers by passing two parameters to a function and return the value and display the output
3. Write a program in JavaScript which copies the text from one textbox to second textbox within the form.
4. Create HTML form as below and validate.

A hand-drawn HTML form with a rectangular border. Inside, there are three input fields stacked vertically. The first field is preceded by the label "Email:", the second by "Password:", and the third by "Mobile No.:". Below these fields is a rectangular button with the word "SUBMIT" in bold, uppercase letters.

Email Address: cannot start with number.

Password: minimum 8 characters and maximum 12 character

Mobile Number: required, must 10 digit number
